1) Data are subject to delays in reporting, thus some data in this report are cut off at the end of 2018, and other data go through mid 2019, as reported through July 2019.

2) The number of people living with HIV in King County changes frequently due to de-duplication efforts and other investigations. The data in this column include prevalent cases as of 12/31/2018 and new HIV & AIDS diagnoses 7/2018-6/2019.

3) Among people living with HIV and assumed to be King County residents as of 12/31/2018, and excluding those with suppressed viral loads in the first half of 2019.

4) Race/ethnicity is presented in a single category which may be misleading when describing individuals in two or more categories, for instance for the period prevalent cases 7/18-6/19, 81% of American Indians/Alaska Natives and 17% of Blacks are multiracial and/or Latinx and thus not included in the American Indians/Alaska Natives and Black categories.

5) Includes presumed heterosexual cases (females without injection drug use who had sexual intercourse with a man whose HIV status and HIV risk behaviors are unknown).

6) For the recently diagnosed, this number also includes some individuals no longer residing in King County.

Counts of New HIV and AIDS Diagnoses and Deaths of People Diagnosed with HIV, King County by half year; 2009 to first half 2019

	2009		2010		2011		2012		2013		2014		2015		2016		2017		2018		2019
New HIV diagnoses	125	141	154	129	123	122	144	116	117	98	113	109	104	101	95	83	77	85	110	108	89
New AIDS diagnoses	111	100	81	71	76	76	76	54	64	79	53	59	59	43	39	36	36	47	60	45	44
Deaths*	58	63	53	41	45	59	36	59	47	52	46	51	50	43	45	44	45	55	45	52	

\* Death diagnosis reporting typically lags behind other reporting, and is not considered reasonably complete for 6 to 18 months after death.
