

# Content Manager Status Report

## Q2 2020

July 9, 2020

Content Manager is King County's enterprise-wide records management system. It is designated by Executive Policy INF-15-4-1-EP as the repository for King County's inactive electronic records. It is also used to manage active electronic records and to manage physical records at the King County Records Center. Content Manager went live on October 7, 2019 and is the replacement for the predecessor system, King County Electronic Records Management System (KC ERMS).

This report provides a snapshot of activity in the system from April 1, 2020 and June 30, 2020. It details percentages of all staff that have been trained, onboarded and used the system. It also provides some statistics about records managed in the system. In addition to countywide statistics, the information in this report is also broken out by department. There are also pages for divisions within DES and DNRP, two of the largest departments using the system. For more specific information than is listed here, please contact the Records Management Program.

Percentages in this report are based on total number of agency employees according to PeopleSoft. There is no one-size-fits-all approach to records management and not all employees need to use Content Manager. In particular, employees with jobs that do not entail managing records (such as bus drivers, custodians or field workers) may have different records management needs. As a result, percentages in this report for certain agencies might be misleading and agencies can use the raw numbers in this report to recalculate percentages as needed.
