

**Project Update
Aug. 24, 2007**

Preparations continue at all three work sites. Steel casings were installed in Southeast Sixth Street at the Bellevue Club/Brookside Office Building site. Casing installation also began at the Bellevue Pump Station site. These casings help stabilize soil at the point of entry and protect existing utilities from damage during drilling. Brush clearing continued at the Lake Hills Connector site.

Work hours will generally continue to be 7 a.m. - 6 p.m. weekdays, and 9 a.m. - 6 p.m. on Saturdays.

No work is scheduled for Labor Day, Monday, Sept. 3.

Site Specific Work Schedule for Aug. 25 - Sept. 7, 2007

(Please note: this schedule is the contractor's best estimate on the timing of activities and is subject to change)

Bellevue Pump Station Work Site

(Southeast Sixth Street, west of 102nd Avenue)

- Construction of temporary side walk and screen wall continues.
- Steel casing installation continues. The casings stabilize soils at the drill's point of entry and guide the initial pilot hole. Installing the casings will take about a week.
- Pilot hole drilling begins Sept. 8.

Bellevue Club/Brookside Office Building Work Site

(Southeast Sixth Street, between 112th and 114th Avenues Southeast)

- Casings cleared of soil to improve drilling conditions.
- Drilling begins Sept. 8.
