Department of Natural Resources and Parks  
Wastewater Treatment Division

## ***Fairwood Interceptor Project Construction Update***

Fall 2005

---

### **Keeping Your Kids Safe and Traffic Moving**

---

#### ***Background***

King County Wastewater Treatment Division (WTD) has been working at and near Fairwood Elementary School for the last several years to improve the sewer system serving the Fairwood community. To complete the final stretch of work, King County will construct new pipes to connect portions of pipe laid earlier in the project.

#### ***Construction in the Playfield***

As part of the final phase of work, a construction area in the Fairwood Elementary School playfield will remain active for the entire year. The construction area will be fenced at all times to keep your kids safe, and alternative areas and activities for recess play have been created.

#### ***Keeping Traffic Moving***

Construction crews will also be digging up portions of Fairwood Boulevard this fall, which will create some traffic diversions and delays. Construction crews have been asked to time their work to avoid disrupting school buses and parents dropping off or picking up students. We appreciate your patience as we work out the kinks in this system.

#### ***Have questions?***

Call our project hotline at any time to ask questions or note concerns or issues. A staff person will return your call as soon as possible.

**Fairwood Project  
Hotline  
206-469-0302**

Visit the project website for more information:
