

May 2007

## ***Increased activity at the Juanita Bay Pump Station work site after May 14 as crews install air ducts***

During the week of May 14, King County crews will begin installing air ducts at the new Juanita Bay Pump Station. The work should be completed by the end of May.

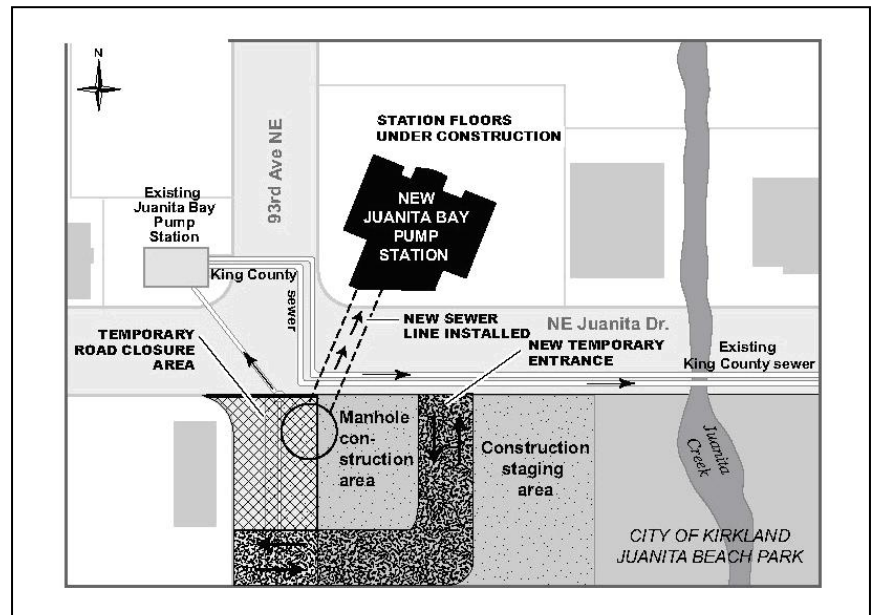

To install the air ducts, crews must insert steel piles nearly 30 feet below grade to allow for excavation, and cut through the pump station foundation. Both activities will increase vibration and noise coming from the site. King County's contractor is closely monitoring vibration levels to minimize disruption and protect against property damage.

After installing the air ducts, crews will continue work on the below grade pump station structure at the corner of Northeast Juanita Drive and 93<sup>rd</sup> Avenue Northeast.

King County is building the new wastewater pump station to help ensure your community receives safe, reliable wastewater service for the next 50 years.

### ***What should you expect?***

- Increased noise and vibration coming from the Juanita Bay Pump Station work area beginning May 14, 2007.
- Work hours will generally remain 7 a.m. – 5 p.m. on weekdays, and 9 a.m. – 6 p.m. on Saturdays as necessary.

Thank you for your continued patience. For more information contact the 24-hour construction hotline at 206-205-3898 or visit the project Web page: <http://dnr.metrokc.gov/wtd/projects/juanita/>.
