

Project update

July 8, 2014

Maintenance/repair work at Murray CSO Control project site scheduled for Saturday, July 12

King County's contractor will repair equipment at the Murray CSO Control Facility project site on Saturday, July 12. Work will begin at 9 a.m. as required by permit.

Nearly all the work will be completed with hand tools. No drilling, pumping or other construction activities will occur. Some materials may be moved around the site with a fork lift.

Making the repairs will help keep the contractor's work to build a watertight ring at the site on schedule.

The ring will serve as the outer wall of the storage tank King County is building to keep more sewage and polluted stormwater out of Puget Sound.

Please avoid the site or engaging workers. Use the project information line listed below for answers to any questions.

What to expect:

- Work on Saturday, July 12
- Work hours: 9 a.m. – 5 p.m.
- Workers on site using hand tools
- A fork lift working to move materials
- No drilling, pumping, digging or truck deliveries to the site are planned

Fixing equipment on Saturday July 12 will help keep the project on schedule. No drilling, pumping or deliveries are planned.
