## **Permanent odor control system coming online! Shoring removal in Lowman Beach Park to begin this week**

### **Odor Control System**

King County's contractor for the Murray CSO Control Project is ready to phase out the temporary odor control system and transition to the facility's permanent odor control unit. The permanent system will use carbon filters to maintain healthy air quality and minimize odors from the underground storage tank and Murray Pump Station. This marks an important step towards completing the fully functional facility. Odors may be temporarily more noticeable while the new odor control system comes online.

### **Shoring Removal**

The contractor will begin removing the shoring walls around the tide vault in Lowman Beach Park this week. The steel sheets used to hold back water and soil are no longer needed as the tide vault work nears completion. Shoring removal will require a vibratory hammer to remove the steel sheets from the ground. Expect increased noise and vibration while shoring removal is underway.

King County and its contractor appreciate your patience as we work to complete the odor control system transition and shoring removal. Crews will continue to backfill around the facility and connect the five-foot-wide sewer pipe, underground storage tank, and local sewer line. Please direct any concerns or inquiries to the project hotline: 206-205-9186.

### **What to expect:**

- Work to occur on weekdays from 7 a.m. to 6 p.m. and on Saturdays from 9 a.m. to 6 p.m.
- Periods of increased noise and noticeable vibration during shoring removal
- Potential for more noticeable odors as the odor control system comes online
- Backfilling to continue around the facility building
- Regular project work to continue on the project site and in Lowman Beach Park
- No additional roadway impacts as a result of this work

*Large tanks inside the odor control room hold carbon filters to reduce odors and maintain air quality.*
