

# North Beach CSO Control Project

**King County**

Department of  
Natural Resources and Parks  
Wastewater Treatment  
Division

## Weekly Construction Update – February 5, 2015

Crews have been in full concrete pouring mode! We continue to pour concrete to install major components of the project, the combined sewer overflow (CSO) tank, the mechanical/electrical building, and the 48b structure. Concrete pours will continue in February and are tentatively planned for:

- February 5
- February 6
- February 17
- February 20

Saturday work is planned for this week. As always, thanks for your patience with all of the activity on site.

### Construction progress and updates

- *CSO Tank:* Installation of the CSO tank walls will be completed this week.
- *Mechanical/electrical building:* Installation of the mechanical/electrical building floor will be completed this week.
- *48b structure:* Installation of the 48b structure floor will be completed this week.

### What to expect from upcoming activities

- Up to 20 concrete trucks are expected to arrive on site for each of the upcoming concrete pours.
- Trucks will be connected to a large concrete pump, which will pour concrete into the excavated area. There will be up to three concrete pump trucks on site at any time.
- Concrete trucks will continue to run while in use. If trucks are not in use, they will be turned off.
- Pumps may be used to keep the excavation site dry. Neighbors may hear gurgling and other pump sounds during the day and at night. Crews will turn off the pumps if they are not needed.
- Before sunrise and after sunset, lights will be used on site for worker safety. The team makes its best effort to reduce lights shining near neighbors' homes, while maintaining safe work conditions for the construction crew.

Recently completed concrete work on underground storage tank.

Storage tank wall form system.
