

North Beach CSO Control Project

King County

Department of
Natural Resources and Parks
Wastewater Treatment
Division

Weekly Construction Update – March 26, 2015

Concrete work for the combined sewer overflow (CSO) tank continues this week. The next concrete pours are tentatively planned for:

- March 27
- April 7

Crews will be working this Saturday, March 28, primarily on the interior of the mechanical/electrical building and backfilling the CSO tank. Thanks for your continued patience and understanding with all of the activity on site.

Construction progress and updates

- *CSO Tank:* The final concrete pour for the “flushing vault” part of the tank will take place on March 27. Crews will continue backfilling and installing utilities through mid-April.
- *Mechanical/electrical building:* Crews finished the roof framing, installing interior insulation, and other components of the building. Crews continue to prepare for installation of the odor control tank and other interior equipment.
- *48b structure:* Crews finished the concrete pour for the top of the structure, and will begin backfilling next week.

What to expect from upcoming activities

- Increased trucks coming to and from the site using the haul route to deliver backfill material.
- Up to 20 concrete trucks are expected to arrive on site for each of the upcoming concrete pours.
- Trucks will be connected to a large concrete pump, which will pour concrete into the excavated area. There will be up to three concrete pump trucks on site at any time.
- Concrete trucks will continue to run while in use. If trucks are not in use, they will be turned off.

Work on the mechanical/electrical building continues, with the new roof almost complete.

Crews install utility lines above the CSO tank, while continuing to backfill the tank area.
