

# North Beach CSO Control Project

**King County**

Department of  
Natural Resources and Parks  
Wastewater Treatment  
Division

## Weekly Construction Update – June 4, 2015

Crews are working to connect wastewater infrastructure elements on-site, including the new combined sewer overflow (CSO) tank to the North Beach Pump Station, and installing new manholes. The contractor continues to work with utility companies to schedule and implement relocation of water, power, and gas lines.

Crews will be working this Saturday, June 6. Thanks for your continued patience and understanding with all of the activity on site.

### Wastewater education and beach walk

On Tuesday, the project area had a visit from Seattle Country Day School third graders! King County Wastewater Treatment Division (WTD) staff talked with the students about our wastewater system and how the new CSO tank will help protect the health of beach visitors, as well as the diverse local marine life. Students then explored the beach at low tide, discovering lots of local marine life and wastewater infrastructure!

### Construction progress and updates

- *Sitework:* Crews continue to lay pipe to connect wastewater infrastructure. A boring machine, powered by a truck mounted hydraulic unit, is currently on site for this work.
- *CSO Tank:* Crews will start connecting the new CSO tank to the pump station this week.
- *Mechanical/electrical building:* Crews continue working on the building interior, including drywall and electrical equipment.

### What to expect from upcoming activities

- During utility work, utility agencies and companies may have vehicles, crews, and equipment on or near the site. While they are on-site to re-install utility lines, King County is not able to direct their work, where they park, or if their trucks are idling.
- Some utility work may require temporary outages. Utility agencies should inform impacted residents of any upcoming outages, and we will do our best to keep you updated on dates and times for planned outages when we can.

*Construction site as of June 1, 2015.*

*Third graders explore marine life with King County WTD staff on the beach near the project site.*
