

MAGNOLIA CONVEYANCE PROJECT

 **King County**
Department of
Natural Resources and Parks
Wastewater Treatment Division

Crews working tonight on West Galer Street

May 24, 2018

After completing pipeline installation, King County's contractor is in the restoration phase of the pipeline remediation project. As part of this effort, King County is evaluating and addressing soil loss that may have occurred along the pipeline alignment during the pipe pull operation. The contractor will add grout in one of the casings that was previously used for evaluation and soil replacement. In order to complete this work before the holiday weekend, crews will work late this evening, and will need to maintain traffic control to allow grouting activity.

Monitoring and surveying activities will continue throughout the completion of the restoration work. Next week, you can expect to see crews conducting the same type of assessment methods that were used previously. Additional work will occur to address any soil loss along the pipeline. King County will continue to keep you up to date as this work proceeds.

What you can expect:

- Two-way traffic will be maintained, but lanes will be shifted and traffic will be directed around the work site.
- Bicycles will travel with vehicle traffic.
- Crews, lighting, and trucks will be located in the right-of-way.
- **Please drive slowly and obey signs and flaggers!**
