

## NORTH MERCER ISLAND/ENATAI Sewer Upgrade Project

November 23, 2016

### Soil sampling resumes on Mercer Island starting November 30

Starting Wednesday, November 30, King County's project team will resume taking soil samples on Mercer Island. You may see crews in yellow vests using a drill rig to take soil samples on the I-90 Trail and in residential areas nearby. Work will take place during daytime hours, Monday through Friday, and will last about a week. These are the final locations for soil sampling this fall.

Crews expect to be working along the I-90 trail for three days, and in residential areas along the project route for about two days. I-90 Trail users may see signs or orange cones on the trail to warn of upcoming crews, but the trail will remain open.

These soil samples will help our team evaluate soil and groundwater conditions to accurately understand the ground conditions in the area as we continue design for the North Mercer Island and Enatai Sewer Upgrade Project.

*Typical drill rig for soil sampling.*

#### What you can expect

- Flaggers will direct vehicle, bicycle and pedestrian traffic around the work site, as necessary.
- Work hours typically 7 a.m. to 5 p.m. Monday to Friday.
- Work is expected to last one day at each location, depending on field conditions.
- A drill rig will be located in the right-of-way until the boring is complete.
- When work is complete, the site will be restored according to City of Mercer Island standards.

**Please watch for equipment and signs in the area and travel slowly to stay safe.**

As always, please contact us if you have any questions or concerns about this work. To sign up for email and text alerts, text KING MERCERSEWER to 468-311 for Mercer Island and KING ENATAISEWER to 468-311 for Enatai.
