

Geotechnical field investigations starting as early as Monday, July 28

Traffic reduced to one lane on SE 38th Street during work hours

Starting as early as Monday, July 28, the King County Wastewater Treatment Division will be conducting geotechnical investigations in your neighborhood to evaluate soil and groundwater conditions as part of the Sunset and Heathfield Pump Stations and Force Main Upgrade project. This work is being performed to gather important information about underground conditions to inform the project's design and is expected to last about two weeks.

Crews will drill in three locations along S.E. 38th St. A truck mounted drill rig will bore a hole up to 70 feet below the surface. Soil samples will be removed to allow King County to analyze soil layers in the area for future work.

Work will occur in three locations along S.E. 38th St.

What to expect

- Work hours typically between 7:00 a.m. to 5:00 p.m. Monday through Friday.
- Work is expected to last about two weeks; each drilling location will take 2-3 days depending on field conditions.
- Noise close to the work area.
- S.E. 38th St. will be reduced to one lane during work hours. Flaggers will direct traffic through the work site.
- Work area with equipment will occupy an area approximately 12 feet wide by 50 feet long in the eastbound lane and shoulder of S.E. 38th St.
- All work will occur in the public right-of-way.
- When the work is complete, the site will be restored according to City of Bellevue standards.
