

## **East Side Interceptor Lining Project**

Conveyance System Improvements in Renton

### ***Eastside Interceptor Lining Project - update for the week of June 20-26***

The [Eastside Interceptor \(ESI\)](#) is one of the main sewer lines that brings wastewater from eastside homes and business to the South Treatment Plant in Renton. This project will repair about 3,700 feet of the line, which is corroded and nearing the end of its service life (see [map](#) below).

For June 20-26, the contractor is finalizing preparations for pipe lining work that will begin soon:

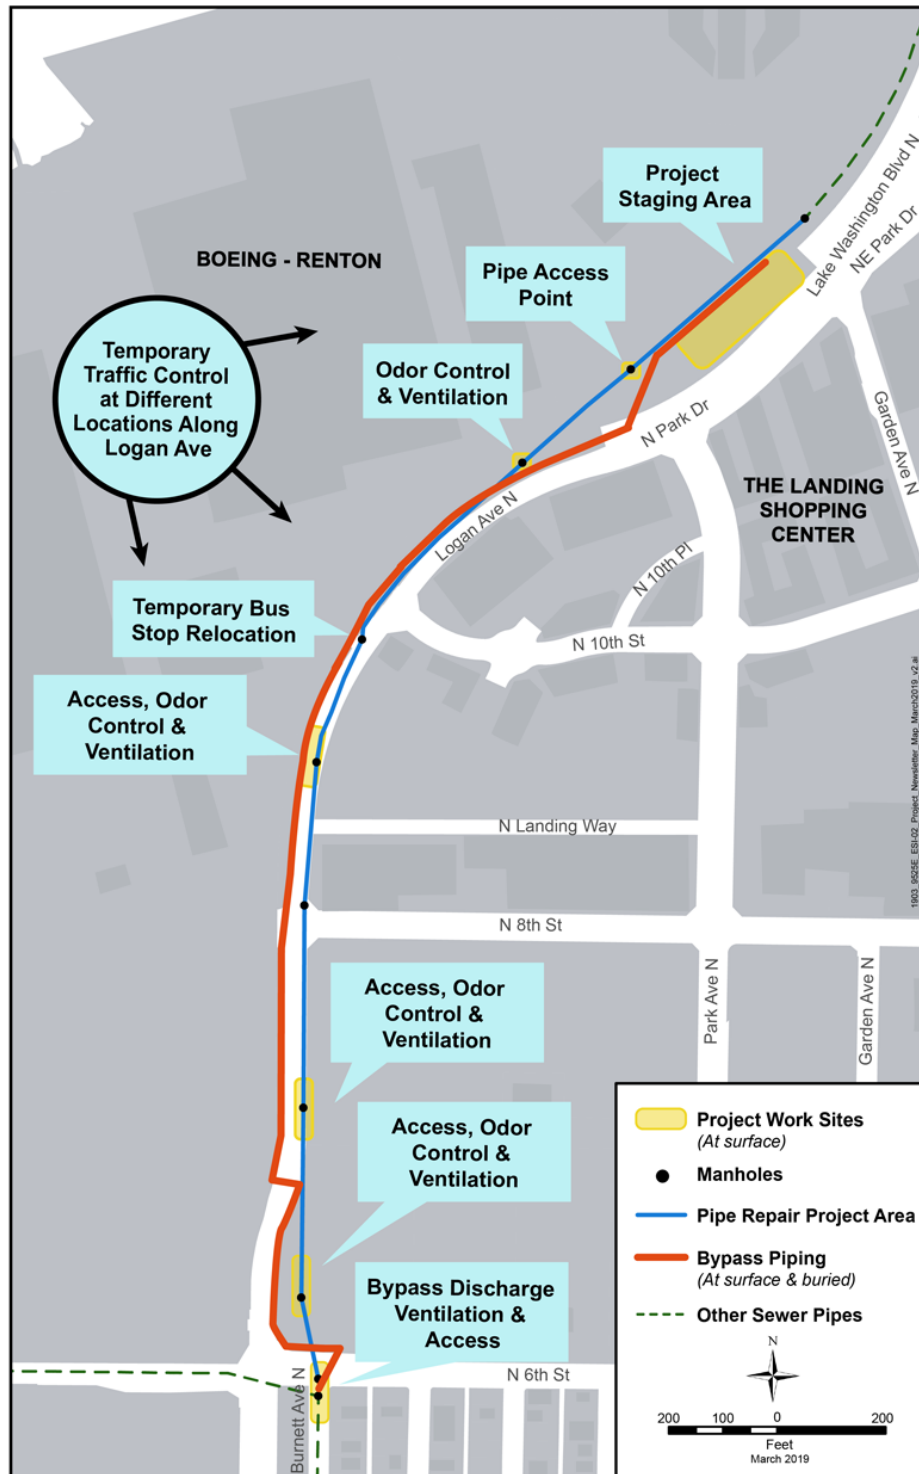

- **Project staging area:** The bypass system is now operating and is being tested. The bypass pumps and generators are operating full time. Noise monitoring measures are in place.
- **No night work expected along Logan Avenue:** The bypass pipe is in place. There is no work planned in the street this week; any night work and traffic control would be for unanticipated work, such as pipe adjustments or repairs.
- **Barriers along Logan Avenue:** This is an active construction area – please do not touch or cross the barriers or walk alongside them, or through the work area. Please cross the street to find safe areas to walk.
- **The bike lane** along Logan between Park Avenue and N 6th Street is closed due to construction. Please cross over to the east side of Logan Avenue or take an alternate route.
- **Upcoming work:** Following successful testing of the bypass, work inside the ESI pipe will begin. This is expected to start in early July.
- Once in-pipe work begins, there will be temporary lane closures on Logan Avenue so crews can access the pipe.

**Burnett Avenue** will remain closed at N 6th Street for several months.
