

## Project update

**June 23, 2021**

In Spring 2021, the project team identified a long-term solution to minimize and ultimately eliminate the unauthorized release of wastewater into Puget Sound due to electrical power disruptions at West Point. The County will install a battery technology system that will condition the electrical power and prevent critical electrical systems from protectively shutting down in response to power disruptions. The conditioned power will enable the critical equipment to continue to operate during power disruptions.
