

5 Reasons to celebrate that we have a 3rd highly safe and effective vaccine for COVID-19

1

The Johnson & Johnson (J&J) vaccine is extremely effective against hospitalization and death from COVID-19.

2

The clinical trials showed that J&J vaccine also provides strong protection against severe COVID-19, even the new variants from South Africa and Brazil.

The J&J shot does not require storage in freezing temperatures, so it can be easily given in many locations. That will help get vaccination to people in more places with more convenience!

4

You only need **ONE SHOT** of the J&J vaccine to be fully vaccinated. That means that you don't need to arrange a second appointment.

3

5

Now we have a new tool to support rapid vaccination. The availability of a third vaccine means more people can be vaccinated sooner and increases the immunity in our community!
