ARE YOU AT RISK FOR DEVELOPING SEVERE COVID?

Treatment may be available to help people who are at high risk of getting very sick.
Test to Treat is a new program that can help people get tested and **quickly access free treatment** if they are positive for COVID-19.

There is no cost for treatment regardless of insurance or immigration status.
A health care provider will tell you **if you are eligible for treatment** based on:

- Your risk level for getting severe COVID-19
- Current medications
- Access to other treatments
- Age (must be 12 years of age and older weigh at least 88 pounds/40 kg).
How do I receive treatment?

- Speak to your healthcare provider first. Your provider can give you a prescription that can be filled anywhere antivirals are available.

- If you do not have a health provider use the Test to Treat locator (aspr.hhs.gov/TestToTreat) to find a clinic near you or call 1-800-232-0233 (TTY 888-720-7489) for help in English, Spanish and more than 150 other languages.

- Bring your test result from an at-home (antigen) test or a testing site to a Test to Treat location.
What types of medication are available through the Test to Treat program?

The Test to Treat program includes two oral antiviral pills – Pfizer’s Paxlovid (Ritonovir-boosted Nirmatrelvir) and Merck’s Lagevrio (Molnupiravir). These medications can help prevent severe illness and hospitalization when taken soon after symptom's begin. Medication must be taken within 5 days of COVID-19 symptoms starting.
How does oral antiviral medication work?

Oral antiviral treatment may help your body fight COVID-19 by stopping the virus that causes COVID-19 from multiplying in your body, lowering the amount of the virus within your body, or helping your immune system.
What other COVID medications are available right now?

While not currently offered through the Test to Treat program, patients with compromised immune systems may be eligible to receive the medication Evusheld to help prevent COVID.

Ask your healthcare provider if you are eligible for Evusheld, or visit the Birds Eye Medical website.
