

# Picket-style Fence

## Description:

- 8'-0" tall, black powder-coated pickets. Pickets can be outcurving or straight, and can be square cross section or shaped
- Posts on 10'-0" centers, though this can vary by manufacturer
- Anti-climb finials

## Benefits:

- Extremely difficult to climb
- Delayed entry with tool attacks
- Damaged sections can be repaired fairly quickly if spare panels are on hand

## Community Concerns and Cons:

- Less visibility through the fence than chain link – viewshed is obstructed partially straight on, and completely at a 45° (approx.) viewing angle
- At least three times as costly as chain link
- Not necessarily stocked locally
