

Welded Wire Fence

Description:

- 8'-0" tall, black powder-coated welded wire mesh.
- Posts on 10'-0" centers, though this can vary by manufacturer
- Wire mesh extends above top rail to create spikes, and additional toppers may be used

Benefits:

- Extremely difficult to climb
- Delayed entry with tool attacks
- Damaged sections can be repaired fairly quickly if spare panels are on hand

Community Concerns and Cons:

- Visibility close to that achieved by chain link, but photography is not possible through the fence.
- At least three times as costly as chain link
- Not necessarily stocked locally
