

In 2023 the King County [WaterWorks Grant Program](#) will award \$5 million for projects that protect water quality, control pollution, and build healthy communities. Projects must provide an improvement to water quality in the Wastewater Treatment Division service area, and are also evaluated based on certainty of success, community involvement, and equity & social justice.

The WaterWorks Grant Team is hosting free public information sessions for potential applicants. Each information session will provide an overview of grant criteria, the application process for the competitive track, examples of past projects, and an opportunity to ask questions.

All events will be held online via Zoom, and advance registration is required to attend. Each session will cover the same material, they are offered at different days and times for your convenience. A recorded version of the session will be available online by early February.

Information Session Dates and Times – [register here](#)

- **Thursday, January 19, 12:00 PM – 1:30 PM**
- **Monday, January 23, 6:00 PM – 7:30 PM**
