Adolescent beavers remain as part of the extended family unit until they leave in search of their own territory. Until then, they help with care of the young as well as dam and lodge building and repair.

At higher elevations where ice forms on ponds, harvesting and storing food for winter.

More trees felled as dams are being strengthened for higher flows.

In Spring & Summer, beavers forage heavily on herbaceous & aquatic plants.

North American beavers have a gestation period of around 90 to 105 days. They give birth to one to four kits, each weighing about 1 pound.

Mature beavers build scent-mounds to mark their territory.
